

## Pep2m, myristoylated TFA

<b>Cat. No.:</b>	HY-P1399A	
<b>Molecular Formula:</b>	C <sub>65</sub> H <sub>119</sub> F <sub>3</sub> N <sub>18</sub> O <sub>16</sub> S	
<b>Molecular Weight:</b>	1497.83	
<b>Sequence Shortening:</b>	{Myr}-KRMKVAKNAQ	{Myr}-KRMKVAKNAQ (TFA salt)
<b>Target:</b>	PKC	
<b>Pathway:</b>	Epigenetics; TGF-beta/Smad	
<b>Storage:</b>	Sealed storage, away from moisture	
	Powder	-80°C 2 years -20°C 1 year
	* In solvent : -80°C, 6 months; -20°C, 1 month (sealed storage, away from moisture)	

### SOLVENT & SOLUBILITY

<b>In Vitro</b>	DMSO : 33.33 mg/mL (22.25 mM; Need ultrasonic)					
	H <sub>2</sub> O : 3.33 mg/mL (2.22 mM; Need ultrasonic)					
		Solvent Concentration	Mass			
	<b>Preparing Stock Solutions</b>			1 mg	5 mg	10 mg
		1 mM		0.6676 mL	3.3382 mL	6.6763 mL
5 mM			0.1335 mL	0.6676 mL	1.3353 mL	
	10 mM		0.0668 mL	0.3338 mL	0.6676 mL	
Please refer to the solubility information to select the appropriate solvent.						
<b>In Vivo</b>	1. Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline) Solubility: ≥ 2.5 mg/mL (1.67 mM); Clear solution  2. Add each solvent one by one: 10% DMSO >> 90% corn oil Solubility: ≥ 2.5 mg/mL (1.67 mM); Clear solution					

### BIOLOGICAL ACTIVITY

<b>Description</b>	Pep2m, myristoylated TFA (Myr-Pep2m TFA) is a cell-permeable peptide. Pep2m, myristoylated TFA can disrupt the protein kinase ζ (PKMζ) downstream targets, N-ethylmaleimide-sensitive factor/glutamate receptor subunit 2 (NSF/GluR2) interactions. PKMζ is an autonomously active isozyme of protein kinase C (PKC) <sup>[1][2]</sup> .
<b>IC<sub>50</sub> &amp; Target</b>	NSF/GluR2 interactions <sup>[1]</sup>
<b>In Vitro</b>	Pep2m, myristoylated TFA (10 μM) blocks PKMζ-mediated AMPA receptor (AMPA) potentiation <sup>[1]</sup> . Pep2m, myristoylated TFA does not block the increase of PKMζ in the hippocampal slices during long-term potentiation (LTP) maintenance, indicating that blocking NSF/GluR2 interactions do not prevent the induction of PKMζ synthesis <sup>[1]</sup> .

Pep2m, myristoylated TFA blocks NSF/GluR2-mediated AMPAR trafficking, and reverses persistent potentiation at both the strongly stimulates synapses and the weakly stimulates synapses that underwent synaptic tagging and capture<sup>[1]</sup>. MCE has not independently confirmed the accuracy of these methods. They are for reference only.

#### In Vivo

Pep2m, myristoylated TFA (10 µg/20 µL) results in an increase in paw withdrawal thresholds (PWTs) on nociceptive responses in the formalin test<sup>[2]</sup>. MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Animal Model:	Female and male Long-Evans hooded rats (8 weeks) <sup>[2]</sup>
Dosage:	10 µg (in 20 µL)
Administration:	Intrathecal injection
Result:	Resulted in an increase in PWTs, in both male and female rats at various time points tested.
