

Pexidartinib hydrochloride

Cat. No.:	HY-16749A
CAS No.:	2040295-03-0
Molecular Formula:	C ₂₀ H ₁₆ Cl ₂ F ₃ N ₅
Molecular Weight:	454.28
Target:	c-Fms; c-Kit; Apoptosis
Pathway:	Protein Tyrosine Kinase/RTK; Apoptosis
Storage:	4°C, sealed storage, away from moisture * In solvent : -80°C, 6 months; -20°C, 1 month (sealed storage, away from moisture)

SOLVENT & SOLUBILITY

In Vitro

DMSO : 60 mg/mL (132.08 mM; Need ultrasonic)
H₂O : < 0.1 mg/mL (ultrasonic) (insoluble)

Preparing Stock Solutions	Solvent Concentration	Mass		
		1 mg	5 mg	10 mg
	1 mM	2.2013 mL	11.0064 mL	22.0129 mL
	5 mM	0.4403 mL	2.2013 mL	4.4026 mL
	10 mM	0.2201 mL	1.1006 mL	2.2013 mL

Please refer to the solubility information to select the appropriate solvent.

In Vivo

- Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline
Solubility: ≥ 2.5 mg/mL (5.50 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline)
Solubility: ≥ 2.5 mg/mL (5.50 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% corn oil
Solubility: ≥ 2.5 mg/mL (5.50 mM); Clear solution
- Add each solvent one by one: 5% DMSO >> 40% PEG300 >> 5% Tween-80 >> 50% saline
Solubility: ≥ 2.5 mg/mL (5.50 mM); Clear solution
- Add each solvent one by one: 5% DMSO >> 95% (20% SBE-β-CD in saline)
Solubility: ≥ 2.5 mg/mL (5.50 mM); Clear solution

BIOLOGICAL ACTIVITY

Description

Pexidartinib hydrochloride (PLX-3397 hydrochloride) is a potent, orally active, selective, and ATP-competitive colony stimulating factor 1 receptor (CSF1R or M-CSFR) and c-Kit inhibitor, with IC₅₀s of 20 and 10 nM, respectively. Pexidartinib hydrochloride exhibits 10- to 100-fold selectivity for c-Kit and CSF1R over other related kinases. Pexidartinib hydrochloride

	induces cell apoptosis and has anti-cancer activity ^[1] .																
IC₅₀ & Target	IC50: 10 nM (c-Kit), 20 nM (cFMS), 160 nM (FLT3), 350 nM (KDR), 860 nM (LCK), 880 nM (FLT1), 890 nM (NTRK3) ^[1]																
In Vitro	Pexidartinib hydrochloride (PLX-3397 hydrochloride) is a potent, selective and ATP-competitive CSF1R (cFMS) and c-Kit inhibitor, shows 10- to 100-fold selectivity for c-Kit and CSF1R over other related kinases, such as FLT3, KDR (VEGFR2), LCK, FLT1 (VEGFR1) and NTRK3 (TRKC), with IC ₅₀ s of 160, 350, 860, 880, and 890 nM, respectively ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.																
In Vivo	<p>Pexidartinib hydrochloride (0.25, 1 mg/kg, i.p., twice daily for 8 days) inhibits the proliferation of microglia and BrdU-positive cells in neonatal mice^[2].</p> <p>?Pexidartinib hydrochloride (1 mg/kg, twice daily for 8 day) shows no obvious effect on the cleaved caspase-3-positive cells in mice^[2].</p> <p>?Pexidartinib hydrochloride (50?mg/kg; p.o.; every second day for 3 weeks) reduces tissue macrophage levels without affecting glucose homeostasis in mice^[4].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <table border="1"> <tr> <td>Animal Model:</td> <td>Neonatal mice^[2]</td> </tr> <tr> <td>Dosage:</td> <td>0.25, 1 mg/kg</td> </tr> <tr> <td>Administration:</td> <td>I.P. twice daily for 8 days</td> </tr> <tr> <td>Result:</td> <td>Decreased the number of microglia and BrdU-positive proliferative cells, but did not change the cleaved caspase-3-positive cells.</td> </tr> </table> <table border="1"> <tr> <td>Animal Model:</td> <td>10-week old litter mate C57BL/6 mice (chow and high-fat diet fed mice)^[4]</td> </tr> <tr> <td>Dosage:</td> <td>50 mg/kg</td> </tr> <tr> <td>Administration:</td> <td>P.o.; every second day for 3 weeks</td> </tr> <tr> <td>Result:</td> <td>Substantially reduced macrophage numbers in adipose tissue of both chow and high-fat diet fed mice without affecting total myeloid cell levels.</td> </tr> </table>	Animal Model:	Neonatal mice ^[2]	Dosage:	0.25, 1 mg/kg	Administration:	I.P. twice daily for 8 days	Result:	Decreased the number of microglia and BrdU-positive proliferative cells, but did not change the cleaved caspase-3-positive cells.	Animal Model:	10-week old litter mate C57BL/6 mice (chow and high-fat diet fed mice) ^[4]	Dosage:	50 mg/kg	Administration:	P.o.; every second day for 3 weeks	Result:	Substantially reduced macrophage numbers in adipose tissue of both chow and high-fat diet fed mice without affecting total myeloid cell levels.
Animal Model:	Neonatal mice ^[2]																
Dosage:	0.25, 1 mg/kg																
Administration:	I.P. twice daily for 8 days																
Result:	Decreased the number of microglia and BrdU-positive proliferative cells, but did not change the cleaved caspase-3-positive cells.																
Animal Model:	10-week old litter mate C57BL/6 mice (chow and high-fat diet fed mice) ^[4]																
Dosage:	50 mg/kg																
Administration:	P.o.; every second day for 3 weeks																
Result:	Substantially reduced macrophage numbers in adipose tissue of both chow and high-fat diet fed mice without affecting total myeloid cell levels.
