BIOLOGICAL ACTIVITY

Description	MS9427 TFA is a potent PROTAC EGFR degrader with K _d s of 7.1 nM and 4.3 nM for EGFR WT and EGFR L858R, respectively. MS9427 TFA selectively degrades the mutant but not the WT EGFR through both the ubiquitin/proteasome system (UPS) and autophagy/lysosome pathways. MS9427 TFA potently inhibits the proliferation of NSCLC cells. MS9427 TFA can be used for researching anticancer ^[1] .																
In Vitro	<p>MS9427 TFA has antiproliferative activity against HCC-827 cells, with a GI₅₀ of 0.87 ± 0.27 μM^[1]. MS9427 TFA (0-10 μM, 16 h) potently induces EGFR^{Del19} degradation (DC₅₀=82 ± 73 nM) and inhibits EGFR phosphorylation (p-EGFR) in a concentration-dependent manner in HCC-827 cells^[1].
